Ashima Adya

Senior Software Engineer | Backend · Data Engineering · Distributed
Systems | Java, Kafka, Flink, Spring Boot, AWS, Azure | Building
Cloud-Native Data Platforms
Canada

Summary

I build the backend systems and data platforms that make products work at scale — ingestion pipelines, real-time streaming, distributed microservices, and the integrations that connect everything together. Over 8+ years, I've worked across the full lifecycle of cloud-native data platforms — designing them from scratch, transforming monoliths into microservices, scaling them for throughput, and keeping them reliable in production. The work I enjoy most is taking a complex data problem and building a clean, scalable system around it.

Some highlights:

- Drove 40% increase in customer adoption through performance optimization and connector expansion
- Built a metadata auto-correction system that reduced data syncing errors by 40%
- Designed an iPaaS integration framework enabling 10× expansion in service offerings
- Achieved 3× throughput improvement by decomposing a pipeline into decoupled, async processing stages
- Cut incident response time by 30% with Prometheus/Grafana observability and SLO monitoring

I've led cross-functional projects from design to delivery, mentored engineers, and hold a Gold Medal in my Master of Technology from NIT Jalandhar.

Currently exploring Senior/Staff Backend Engineering and Data Engineering roles — remote or Vancouver-based.

Tech: Java, Spring Boot, Kafka, Flink, NiFi, Python, PostgreSQL, Cosmos DB, MongoDB, AWS, Azure AKS, Docker, Kubernetes, ArgoCD, SQS, S3

Experience

Zafin

Senior Software Engineer

March 2023 - Present (3 years 4 months)

Vancouver, British Columbia, Canada

FinTech SaaS Platform: Designed and built distributed microservices using Java, Spring Boot, Apache Flink, and NiFi to power tier determination, loyalty rewards, and fee rebates for various North American banks — achieving a 3× throughput improvement by decomposing the system into decoupled, asynchronous processing stages.

Data Integration & Streaming: Implemented end-to-end integration strategies including Kafka real-time streaming, RESTful APIs for program enrollment and reward preferences, SFTP-based file exchange, and large-scale batch ETL workflows with NiFi and Flink across PostgreSQL and Cosmos DB.

☁️ # Cloud Infrastructure & Observability: Managed Azure AKS clusters end-to-end — deployments, autoscaling, ingress/egress, local testing with kind — with Prometheus/Grafana dashboards, SLO monitoring, and ArgoCD-based CI/CD pipelines. Reduced incident response time by 30%.

Engineering Leadership: Led a team of 5 engineers through epic planning, hotfixes, and production support. Mentored junior engineers, authored E2E system architecture docs, and conducted 40+ engineering interviews.

Gainsight

Senior Software Engineer

July 2019 - June 2022 (3 years)

Bengaluru, Karnataka, India

Built the cloud-native data platform powering Gainsight's customer success analytics — from ingestion APIs to real-time sync and third-party integrations.

Cloud-Native Data Platform: Transformed the data ingestion pipeline from monolith to microservices using Java, AWS, MongoDB, RabbitMQ, and PostgreSQL — improving system reliability by 20% and driving a 40% increase in customer adoption.

Data Ingestion APIs & Connector Platform: Designed and built data ingestion APIs including connectors and webhooks, enabling seamless data imports from third-party systems. Led the iPaaS integration framework end-to-end as a

cross-functional effort with PM and engineering, enabling a 10× expansion of service offerings.

Performance & Scale: Optimized pipeline throughput and reduced API response latency through out-of-the-box job configurations, script-based job management, priority mechanisms, and rate limiting — resulting in a 20% improvement in system performance.

Metadata & Real-Time Sync: Designed a metadata auto-correction system reducing syncing errors by 40%. Built Kafka-based real-time sync between Salesforce and Gainsight, enriching customer insights for data-driven retention. Collaborated with PM to implement event-driven usage reporting for adoption analytics.

Mentorship & Quality: Mentored junior engineers across code reviews, deployments, and distributed systems best practices, ensuring high-quality delivery across the team.

ITC Infotech

Associate IT Consultant

August 2015 - August 2017 (2 years 1 month)

Bengaluru, Karnataka, India

Backend Development: Delivered APIs using Java and Spring Boot with test-driven development (JUnit, Mockito). Built a multi-currency financial conversion service streamlining reporting across distributed business systems. Refactored legacy code improving Sonar quality scores and test coverage.

Cross-functional Delivery: Collaborated with cross-functional teams on Agile deliveries, handling database issue resolution, integration of external data sources, and configuration of FlexPLM.

Education

Dr B R Ambedkar National Institute of Technology, Jalandhar

Master of Technology, Computer and Information Security · (2017 - 2019)

Chandigarh Group of Colleges, Landran, Punjab

Bachelor of Technology - BTech, Computer Science · (2011 - 2015)
